NOTE: ATTEMPT ALL QUESTIONS. ALL QUESTIONS CARRY EQUAL MARKS.

Q. No.		Question	CLO	Taxonomy Level	PLO	Marks
01	(a)	Explain in detail what variables and data types are in C programming. Discuss the importance of choosing the correct data type for storing values, and explain the differences between int, float, double, and char. Give examples of how each type is used in a program and mention the memory they occupy.	1	C1	1	05
	(b)	Write a C program that: Takes two integers, two floating-point numbers, and two characters as input from the user. Performs addition for numbers and displays the sum of integers and floats separately. Displays the ASCII values of the characters entered.	1	C1	1	05
02	(a)	Explain the concept of conditional statements in C, focusing on if, if–else, and nested if–else. Discuss how these statements allow a program to make decisions based on different conditions. Include an example scenario where nested conditions are necessary.	2	C2	2	05
	(b)	Write a C program that: Takes the marks of a student in three subjects as input. Calculates the average marks. Determines and prints the grade based on the average: A for 80% and above B for 60–79% C for 40–59% F for below 40% Also, print a message if the student passed or failed (pass mark 40%).	2	C2	2	05
